SaaS Sentinel
SaaS Portfolio Intelligence (SPI)

saassentinel.co.uk

Live · Secure · Scalable · Profitable

Features and benefits

Everything SaaS Sentinel does, grouped by the four pillars of SaaS Portfolio Intelligence.

Supabase monitoring — LIVE

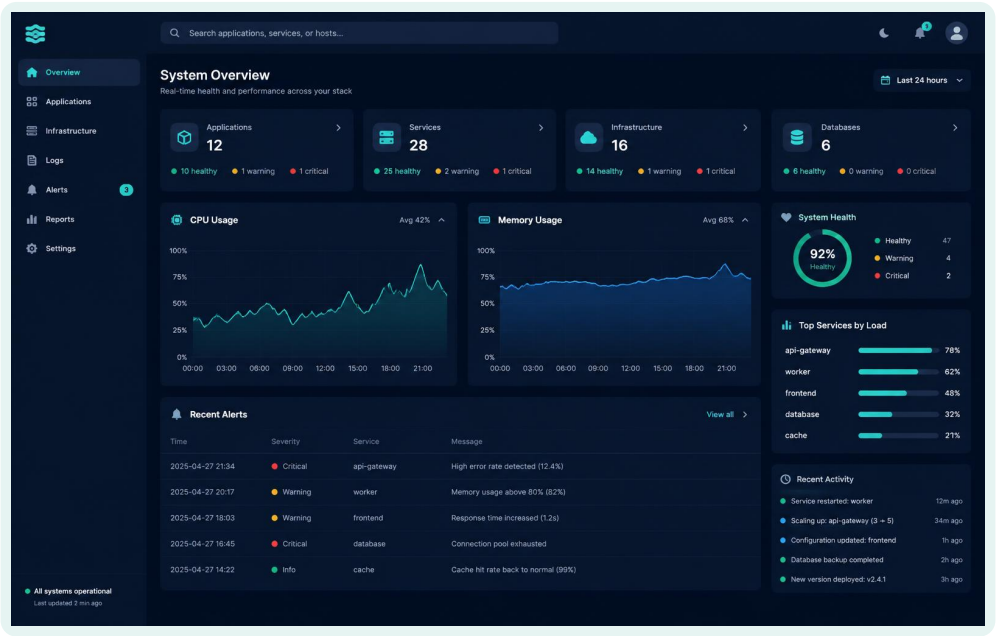

- **Health and uptime every 15 minutes** — Know an app is down before a customer emails you.
- **Combined error logs** — See real errors across all log sources in one list, with e-mails masked.
- **Backups and publishes** — Spot missing backups and apps that haven't been published in a while, against limits you set.
- **Domains and certificates** — Warnings before a certificate or domain expires.

Security and compliance — SECURE

- **Database advisories** — Supabase security and performance warnings in plain English, with a risk register for accepted risks and review dates.
- **Public exposure checks** — Daily scans for leaked keys, exposed files, security headers and content security policy weaknesses, with copy-paste fix prompts.
- **Dependency vulnerabilities** — Packages in your GitHub lockfile checked daily against the OSV database.
- **Branding checks** — Titles, share previews, canonical links and icons checked so every app looks professional.

Capacity planning — SCALABLE

- **Weekly capacity review** — Seven days of readings summarised with trends, so you upgrade at the right time.
- **Postgres upgrade guidance** — Each upgrade explained by type and urgency, with support dates and links to official docs.
- **Upgrade costs** — See what a larger Supabase compute size would add to your monthly bill.

The SaaS Sentinel overview: every app, one screen.

Features and benefits

Continued: spend, communication and security of your own account.

SaaS spend management — PROFITABLE

Cost per app and component	Hosting, database, AI and Lovable credit costs in one place, with invoices read automatically.
Licence model	Cost per licence, break-even point and profit margin for every app.
Monthly cost history	Recurring and one-off costs counted in the right month, never double-counted.

Communication and alerts — TRUSTED

Public status pages	Branded status page per app with 90-day uptime, incident and maintenance history, and a live badge.
Scheduled maintenance	Calendar invites for customers, clash warnings, and expected alerts paused during the window.
Alerts and weekly reports	Email and SIGNL4 alerts, plus a weekly summary with capacity charts.

Built for teams and MSPs — ISOLATED

Multi-tenant by design	Each developer's and each customer's data is kept separate.
Secure sign-in	Google or Microsoft sign-in, with optional two-step verification per organisation.
Encrypted credentials	API keys and personal data encrypted at rest and only decrypted on the server.

Simple pricing

Free trial	14 days, every feature, no card needed.
Starter	£18 a month, including 5 projects.
Growing portfolios	Extra projects charged in bands, getting cheaper per project as you grow.
Tax	Prices exclude VAT; tax is calculated at checkout.
